

INTRODUCING THE MIELE WT1 WASHER-DRYERS

Fast and connected – and the first washer-dryer with perfect dispensing

When it comes to convenience, efficiency and style, the new Miele WT1 Washer-Dryer series has it all, ensuring 4 kg of laundry can be immaculately washed and dried in less than 3 hours without any manual intervention!

Even the detergent is dispensed automatically thanks to Miele's exclusive integrated TwinDos automatic detergent dispensing system, which has been verified as the best liquid detergent system on the market*. TwinDos not only ensures effective removal of stubborn stains, it also achieves detergent savings of up to 30 percent given its accuracy of auto dispensing**.

To this exceptional functionality, the Miele WT1 adds the space-saving practicality of a washing machine and dryer in the same unit, while providing the performance and convenience reflected in the current W1 and T1 range.

As Gernot Trettenbrein, head of Miele's Domestic Appliance International business, says: "The results of the WT1 appliances have to be seen to be believed - from performance data through to technically sophisticated extras which are only available from Miele."

The new Miele WT1 Washer-Dryer series includes the WTH 130 WPM model with a 7 kg load for the wash cycle and 4 kg load for drying, as well as the WTZH 730 WPM model with an 8 kg load capacity for washing and 5 kg load capacity for drying.

Short cycle thanks to PowerWash 2.0

Whatever the capacity, the WT1 series sets the standard with its **short cycle times**: 4 kg of laundry is washed and dried in less than 3 hours, without any unloading or other manual intervention. For 5 kg of laundry, the WT1 requires less than 3.5 hours in the WTZH 730 model.

This convenience is made possible by the Miele **PowerWash 2.0** process which wets the laundry faster through spray action, short interim spin cycles and precision load-dependent controls so that less water is required in the process. It also achieves a reduction in energy consumption, particularly when washing less-than-full loads.

*German Hohenstein Test Institute Test No: HL 13.2.10991.

** According to Oeko-Instytut e.V. report dd. 06.09.2013: "Potential savings with automatic TwinDos dispensing on washing machines".

INTRODUCING THE MIELE WT1 WASHER-DRYERS continues..

Most convenient washer-dryer on the market

In addition to the outstanding performance and convenience set by Miele's integrated TwinDos automatic detergent dispensing system, the Miele WT1 series affords further user convenience with advanced features.

These include the **Delay-Start Function** as well as the **Programme Manager**, which permits programme customisation, and **SteamCare** which reduces the need for ironing by up to 50% or can freshen up briefly-worn garments. In addition, the gentlest of garment care is provided by the Miele Honeycomb drum, with laundry gliding gently on a thin film of water.

For special textiles such as woollen garments, down-filled items or simply fabric conditioner, the washer-dryer range also features **CapDosing**, allowing the dispensing of portioned capsules for garments that require special care.

In addition, the WTZH 730 WPM model from the WT1 series has the ability to connect to the Internet via a home's wireless network using the Miele@mobile app without any proprietary hardware. Information on the machine status can be accessed remotely for great user convenience.

Given the outstanding performance and innovative features of the WT1 Washer-Dryer series, the appliances are well positioned to suit a variety of households seeking a space-saving solution and round out the exceptional Miele range of laundry appliances.

The WT1 series is available from Miele Experience Centres and Miele Authorised Retailers nationally as well as the Miele online shop. The selling price of the Miele WTH 130 WPM is \$3,499 while the WTZH 730 WPM has a selling price of \$3,999.
