

Building-in dimensions

Dimensions are given in mm.

Installation in a tall or base unit

When building the oven into a base unit underneath a cooktop, please also observe the installation instructions for the cooktop as well as the building-in height required for the cooktop.

Installation

Side view

A 47 mm

Connections and ventilation

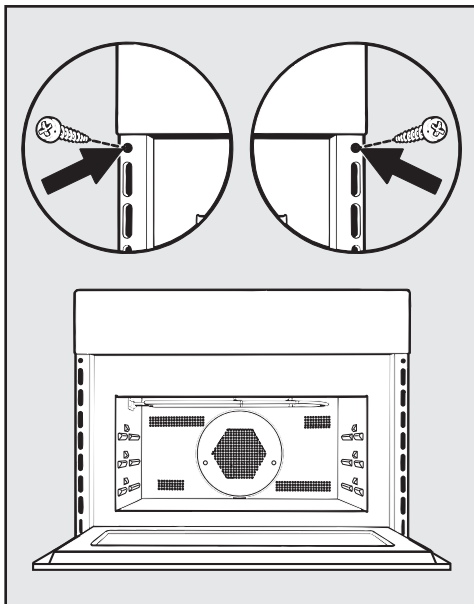

- ① Front view
- ② Mains connection cable, length = 2000 mm
- ③ No connections permitted in this area
- ④ Ventilation cut-out, min. 150 cm²

Installation

Installing the oven

- Connect the mains cable from the oven to the electricity supply.
- Push the oven into the housing unit and align it.

- Open the door and use the screws supplied to secure the oven to the side walls of the housing unit through the holes in the oven trim.

Electrical connection

Danger of injury! All electrical work should be undertaken by a suitably qualified and competent person in strict accordance with current national and local safety and building code regulations. Installation, repairs and other work by unqualified persons could be dangerous. Miele cannot be held liable for unauthorised work. Ensure power is not supplied to the appliance until after installation or repair work has been carried out. The appliance is supplied with a mains connection cable for connection to AC 50 Hz, 230 V.

The fuse rating must be at least 16 A.

Connection to a switched socket is recommended as this provides easier access in the case of a service call. Connection should be made via a suitable isolator which complies with national and local safety regulations. For extra safety, it is advisable to protect the appliance with a suitable residual current device (RCD) with a trip current of 30 mA.

If a plug is fitted, ensure that the plug and switch are accessible at all times.

If the appliance is hardwired or if the switch is not accessible after installation, an additional means of disconnection must be provided.

When switched off there must be an all-pole contact gap of 3 mm in the isolator switch (including switch, circuit breakers and relays).

Voltage, rated load and fuse rating are given on the data plate situated at the front of the oven compartment. Please ensure these match the household electricity supply.

If the connection cable is damaged, it must be replaced by a suitably qualified and competent person in order to avoid a hazard.

Temporary or permanent operation with a self-sufficient or non-mains synchronous energy supply system (e.g. isolated networks, back-up systems) is possible. A requirement for the operation is that the energy supply system complies with all current local and national requirements that apply to stand-alone, solar and/or battery systems.

The protective measures provided in the domestic installation and in this Miele product must also be assured in their function and operation in isolated operation or in non-mains synchronous operation, or replaced with equivalent measures in the installation.
