Operating and installation instructions for condenser tumble dryer
PT 7135 C Vario

To avoid the risk of accidents or damage to the machine, it is **essential** to read these instructions before it is installed, commissioned and used for the first time.
Caring for the environment

Disposal of the packing material

The transport and protective packing has been selected from materials which are environmentally friendly for disposal and can normally be recycled.

Ensure that any plastic wrappings, bags, etc. are disposed of safely and kept out of the reach of babies and young children. Danger of suffocation.

Rather than just throwing these materials away, please ensure they are offered for recycling.

Disposal of your old appliance or machine

Electrical and electronic appliances / machines often contain materials which, if handled or disposed of incorrectly, could be potentially hazardous to human health and to the environment. They are, however, essential for the correct functioning of your appliance or machine. Therefore, please do not dispose of your old machine or appliance with your household waste.

It should be unplugged or disconnected from the mains electricity supply by a competent person. The plug must be rendered useless and the cable cut off directly behind the appliance or the machine to prevent misuse.

Energy saving tips

To avoid unnecessarily long drying times and high consumption of energy:

- Make sure that your laundry is thoroughly spun before drying. The higher the spin, the greater the savings that can be made in energy and time during drying.

- Load according to the optimum amount of laundry recommended for the programme being used. Underloading is uneconomical. Overloading gives a poorer quality of drying and may cause unnecessary creasing.

- Make sure the room in which the dryer is located is well ventilated.

- After every cycle remove the fluff from the fluff filter in the door and in the door opening (see "Cleaning and Care").

- Check the condenser unit from time to time and clean it when necessary.

Please dispose of it at your local community waste collection / recycling centre and ensure that it presents no danger to children while being stored for disposal.

Technical data ....................................................................... 49
It is essential to read these instructions.

This tumble dryer conforms to current safety requirements. Inappropriate use can, however, lead to personal injury and damage to property.

To avoid the risk of accidents and damage to the tumble dryer, please read these instructions carefully before using it for the first time. They contain important information on its safety, installation, use and maintenance.

Keep these instructions in a safe place and ensure that they are made available to new users. They must be made aware of these warning and safety instructions.

Pass these instructions on to any future users/owners of the tumble dryer.

Correct application

This tumble dryer is only intended for drying fabrics which have been washed in a water solution, and marked on the manufacturer’s care label as being suitable for tumble drying. "Dry cleaning kits" for freshening up garments in a tumble dryer are increasingly available on the market. If using, do so at your own risk, and follow the instructions provided on the packaging. Any other applications may be dangerous. Miele cannot be held liable for damage resulting from incorrect or improper use or operation.
Warning and Safety instructions

The tumble dryer is not intended for outdoor use.

This tumble dryer is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience or knowledge, unless they are supervised whilst using it or have been shown how to use it by a person responsible for their safety.

Keep children away from the tumble dryer at all times. It is not a toy! To avoid the risk of injury, do not allow them to play on or near it or to play with its controls. Supervise its use by the elderly or infirm, and supervise children whilst you are using it.

Technical safety

Before setting up the tumble dryer, check it for any externally visible damage. Do not install or use a damaged tumble dryer.

Do not make any alterations to the tumble dryer, unless authorised to do so by Miele.

The electrical safety of this tumble dryer can only be guaranteed when continuity is complete between it and an effective earthing system which complies with current local and national safety regulations. It is most important that this basic safety requirement is present and regularly tested, and where there is any doubt, the on-site wiring system should be inspected by a qualified electrician. Miele cannot be held liable for the consequences of an inadequate earthing system (e.g. electric shock).

Unauthorised repairs could result in unforeseen dangers for the user, for which Miele cannot accept liability. Repairs should only be undertaken by a Miele approved service technician. Ensure current is not supplied to the tumble dryer until after maintenance or repair work has been carried out.
Faulty components must only be replaced by genuine Miele original spare parts. Only when these parts are fitted can the safety standards of the tumble dryer be guaranteed.

To ensure the correct performance of the machine and to prevent the risk of faults and fire, it is important to check the machine and carry out maintenance on a regular basis.

In the event of a fault or for cleaning purposes, the tumble dryer is only completely isolated from the electricity supply when:
- it is switched off at the wall socket and the plug is withdrawn, or
- it is switched off at the mains, or
- the mains fuse is disconnected.

This tumble dryer must not be installed and operated in mobile installations (e.g. on a ship).

In areas which may be subject to infestation by cockroaches or other vermin, pay particular attention to keeping the tumble dryer and its surroundings in a clean condition at all times. Any damage which may be caused by cockroaches or other vermin will not be covered by the warranty.
Correct use

⚠️ To avoid the possible danger of fire please read these warnings carefully.

⚠️ A clogged filter is a fire hazard!
The lint filter must be cleaned after every programme.

Do not let anyone sit or lean on the door, as this can cause the tumble dryer to tip up. Danger of injury.

Always close the door after use. This way you will avoid the danger of:
– Children climbing onto or into the dryer or hiding things in it.
– Pets or other small animals climbing into it.

The tumble dryer must not be hosed down.

Always keep the area around the tumble dryer free of dust and fluff. Dust drawn into the appliance can, over time, cause blockages. Faults can then occur as well as the risk of fire.
The dryer must not be used without the fluff filters in place or if the fluff filters are damaged in any way. Damaged filters can cause operational faults and blockages in the airways, condenser unit and heating elements. Fire hazard! In the event of a damaged filter, switch the dryer off and replace the filter with a new one.

The fluff filters must be cleaned regularly.

The dryer must not be used without the condenser unit in place.

The fluff filters must be thoroughly dried after cleaning. Damp or wet filters could cause operational faults.

Do not install the tumble dryer in a room where there is a risk of frost occurring. At temperatures around freezing point the tumble dryer may not be able to operate properly. There is a risk of damage if the condensed water is allowed to freeze in the pump, hoses and / or condensed water container. The ambient room temperature should be between +2°C and +35°C.

If the water is drained externally through the drain hose instead of being collected in the condensed water container, make sure the drain hose is securely attached if you hang it in a sink or basin to avoid the hose slipping and the water causing damage.

Condensed water is not drinking water. It can cause health problems in both people and animals.
Remove all objects from pockets such as lighters and matches.

To prevent the risk of fire, the following textiles must not be dried in this tumble dryer:

- Items which have not been washed.
- Items, such as workwear, which have not been thoroughly cleaned and which are still soiled with grease, oil or other deposits (such as cosmetics, lotions etc). If items have not been thoroughly cleaned there is a danger that these might ignite when heated, even after they have been removed from the dryer at the end of the programme.
- Items which have been treated with inflammable cleaning agents or contain residues of acetone, alcohol, benzine, petrol, stain remover, turpentine, wax, wax remover or other chemicals (e.g. mops and floor cloths).
- Items which have been splashed with hair lacquer, hair spray, nail varnish remover or similar substances.
When washing such heavily soiled items, ensure that you use sufficient detergent and select a high temperature. If in doubt, wash the items several times.

Oil-affected items can ignite spontaneously, especially when exposed to heat sources such as in a tumble dryer. The items become warm, causing an oxidation reaction in the oil. Oxidation creates heat. If the heat cannot escape, the items can become hot enough to catch fire. Piling, stacking or storing oil-affected items can prevent heat from escaping and so create a fire hazard.

If it is unavoidable that fabrics contaminated with vegetable or cooking oil, or hair care products, be placed in a tumble dryer, they should first be washed in hot water with extra detergent - this will reduce, but not eliminate, the hazard.

Risk of fire!
This tumble dryer must not be connected to a power socket with a timer or overloading switch-off, e.g. mult-socket powerboard. If the drying programme is interrupted, there is the risk of laundry catching fire.
To prevent the risk of fire, the following textiles or products must not be dried in this tumble dryer:

- Items which have been dry-cleaned (for example, with a chemical treatment).
- Fabrics which contain a large proportion of rubber, foam rubber or rubber-like materials. For example, products made from latex foam rubber, shower caps, waterproof textiles, rubberised articles and items of clothing and pillows with foam rubber filling.
- Fabrics which contain padding or fillings (e.g. pillows, jackets). If these were damaged, the filling could get out with the risk of igniting in the dryer.

In many programmes, the heating phase is followed by a cooling down phase to ensure that the items are not too hot to handle when you remove them (this also avoids the danger of the laundry self-igniting). The programme is not finished until the cooling down phase is complete. Ensure that you always wait until the end of the programme before removing the laundry.

**Warning**: Do not switch the tumble dryer off before the end of the drying programme. If this was done and the laundry was then removed immediately, it could give off a great amount of heat.

Fabric conditioner and similar products must be used according to the instructions on the manufacturer’s packaging.

Benzine, petrol, paraffin or any easily flammable liquid must not be stored or used near the tumble dryer. Fire and explosion risk!

Do not allow air contaminated with chlorine, fluorine or other vapours containing solvents to get into the tumble dryer. Fire hazard.
For tumble dryers with stainless steel surfaces:
The stainless steel surfaces must not come into contact with liquid cleaning and disinfecting agents which contain chlorine or sodium hypochlorite. These agents can have a corrosive effect on stainless steel.

Aggressive vapours containing chlorine can also be corrosive. Do not store containers of these agents near the machine.

Accessories

Only use genuine Miele spare parts and accessories with this machine. If spare parts or accessories from other manufacturers are used, this will invalidate the warranty, and Miele cannot accept liability.

Miele cannot be held liable for damage caused by non-compliance with these Warning and Safety instructions.
Operating the tumble dryer

Control panel

1 Display
After the machine has been switched on, the display lights up. As soon as the dryer is ready to use, the Entry menu appears in the display.

2 Short cut buttons (keys)
For selecting an individual drying programme quickly. These buttons can be programmed to select your own favourite drying programmes.

3 Start button
The indicator light flashes when a programme can be started and lights up when the programme starts.

4 PC/Optical interface
This is used by Miele service technicians during servicing work for testing purposes.

5 Multi-function selector
This is used to select menu options (by turning it) and to confirm your selection (by pressing it).

6 On/Off button
For switching the dryer on and off. To save energy, the dryer will switch off automatically 15 minutes after the end of the programme/anti-crease phase or 15 minutes after the dryer is switched on if no other selection is made.

7 o→ button
Opens the machine door independently of the electricity supply.

Before using for the first time

Before using the machine for the first time, ensure that it is correctly installed and connected. See "Installation and connection".

Commission the machine as described in the separate booklet "Commissioning, Programme chart and Settings" supplied with the machine.
When the tumble dryer is switched on, the entry menu (with four favourite programmes listed) appears with Programme selection highlighted.

Multi-function selector

Turning the multi-function selector moves the highlighting to the next option.

Pressing the multi-function selector selects the highlighted option.

Shortcut buttons

Pressing a shortcut button selects one of the four favourite programmes shown on the left of the display.

If you wish to change the programmes shown in this list, you can do so (see "Selecting a programme - Saving a favourite programme" for more information).

The shortcut buttons have different functions in the other menus. Where this is the case, an arrow will appear in the display above the shortcut button, together with a description of its function.

Programme selection

There are two ways of selecting a programme:

– Option 1: Select the Programme selection menu in the display and confirm your selection by pressing the multi-function selector.

– Option 2: Press shortcut button 1 2 3 or 4. This will automatically take you into the main menu for that programme.
Operating the tumble dryer

Programme selection menu

You can use the multi-function selector to select any programme. The highlighting will move up or down depending on the direction the multi-function selector is turned in.

The ▼▲ arrows on the right of the display, indicate further options.

Pressing the multi-function selector takes you to the main menu of the programme selected.

Drying programme main menu

- Turn the multi-function selector to highlight either the "Drying level" or the "Programme".
- Pressing the multi-function selector selects the highlighted option and opens the relevant sub-menu.
- *Low temperature* and *Timer* can be selected by pressing shortcut buttons 1 or 2.
- To go back to the entry menu, press shortcut button 4.

Alternatively, you can also highlight and confirm all options by just using the multi-function selector.

Settings menu

The *Settings* menu is used to alter the tumble dryer’s electronics to suit different requirements. See the separate booklet "Commissioning, Programme chart and Settings" for further information.
Operating the tumble dryer in Laundrette mode

The entry menu will vary depending on the Controls setting selected.

- The dryer is operated either with shortcut buttons 1, 2, 3, 4 or the multi-function selector.

</tr>
</tbody>
</table>

Before drying

- Wash heavily soiled items very thoroughly, ensuring that you use sufficient detergent and select a high temperature. If in doubt, wash the items several times.

- Do not put soaking wet items into the tumble dryer. Make sure that your laundry is thoroughly spun before drying. The higher the spin, the greater the savings that can be made in energy and time during drying.

- New dark-coloured garments should be washed and dried separately from light-coloured garments the first few times they are washed, to avoid the risk of colours running and discoloring other garments or even the plastic components in the tumble dryer. Dark-coloured fibres can also settle on light-coloured garments and vice versa.

- Starched laundry can be dried in the tumble dryer. To achieve the usual finish, double the amount of starch should be used.

- Check the seams of padded or down-filled items to prevent the risk of fillings coming out. These could catch fire in the tumble dryer.

- Tie together textile belts and apron ties to stop them getting tangled.

- Fasten duvet covers etc. to prevent small items from being trapped inside them. Fasten hooks and eyes etc.

- Stitch in or remove loose underwiring from bras.

- Leave jackets open and undo any long zips so that textiles dry evenly.

- For an even drying result, it is important to . . . spin,
  . . . shake out,
  . . . and sort items according to fabric type, size, care label and the drying level required.
2. Load the tumble dryer

⚠️ Using the tumble dryer incorrectly could cause a fire. Read the "Warning and Safety instructions" before using the tumble dryer.

⚠️ Make sure that objects, e.g. detergent dispensing balls, have been removed from the laundry. They could melt and cause damage to the dryer or the laundry.

- Remove all objects from pockets such as lighters and matches.
- Do not overload the drum. Overloading can cause unnecessary wear and tear to the laundry, give a disappointing drying result and cause more creasing.
- To save energy, always observe the maximum load for each programme (see the separate booklet "Commissioning, Programme chart and Settings").
- Minimum iron fabrics tend to crease more the greater the load. This is also the case for garments made from very fine weave fabrics, such as shirts or blouses. If necessary, reduce the size of the load for these types of fabrics.

3. Select a programme

- On many programmes, different drying levels can be selected depending on individual requirements . . . e.g. Normal+ for laundry that you want to fold and put away immediately after drying.
- . . . e.g. Machine iron or Hand iron if the laundry needs further processing after drying. See separate booklet "Commissioning, Programme chart and Settlings".
- For delicate fabrics with the ☺ care label, select Low temperature as well.
- Down-filled garments have linings which have a tendency to shrink, depending on the quality of the item. They can be partially dried using the Smoothing programme.
- Pure linen should only be machine dried if specified as suitable by the manufacturer on the care label, as the surface of the fabric may otherwise become rough. They can be partially dried using the Smoothing programme.
- Woollens and wool blends tend to become matted and shrink if dried in a tumble dryer. Only dry these fabrics in a Woollens programme.
- Loopknit garments (e.g. T-shirts and underwear) tend to shrink depending on their quality. Do not over-dry these textiles. When purchasing these garments, it is advisable to take their shrinkage properties into account.
Short instructions

1 Sort the laundry

⚠ It is very important to read the "Notes and tips on laundry care" section before proceeding.

2 Load the tumble dryer

- Open the door.
- Load the drum.

⚠ To avoid damaging your laundry, when shutting the door check that no items of laundry have become trapped in the door opening.

- Shut the door either with a gentle swing, or lean against it and push it shut.
Select a programme

Switch the dryer on by pressing the On/Off button.

Please note:

- If no further selection is made within 15 minutes, the dryer will switch off automatically.
- This does not apply to machines with a payment system.

Programme chart

- See separate booklet "Commissioning, Programme chart and Settings".

You can select a programme either by:

1. Using the appropriate short cut button to select one of the four programmes listed in the display ("favourites"), or

2. Selecting a programme from the Programme selection menu (turn A and press B).

Select Low temperature or Timer, if required

- Select Low temperature and/or the Timer (Delay start time) from the relevant sub-menu.

Coin operation/payment system

If your machine is connected to a payment system, the amount of payment required will appear in the display.

Credit will be lost if, after the programme has started, the door is opened or the programme cancelled (depending on how the machine was set up).
Short instructions

4 Start the programme

The Start button will flash as soon as a programme can be started.

- Press the Start button.

The Start button will now light up.

- **Prog. running** will appear in the display, followed by **Drying** and the programme duration.

- With sensor drying programmes, e.g. **Machine iron** ... **Hand iron** etc., the drying level reached will be shown in the display later on.

Changing the programme sequence

Once drying is in progress, you can press one of the short cut buttons:

- **Button 2. Timer** to call up the estimated end time of the programme and the current time of day.

- **Button 3. Save** to save the current programme as a favourite.

- **Button 4. Cancel** to cancel the current programme. This only applies to machines with a payment system, if a programme can be cancelled **without the loss of credit**.

See section "Changing the programme sequence" for further information about the following:

- Payment system
- Changing a programme once it has started
- Cancelling the current programme

- Adding or removing laundry after a programme has started
- Interruption to the power supply
- Time remaining

Programme duration/Estimated time remaining

When a programme is selected, the estimated duration will appear in the display. Please be aware that it is only an estimate!

The following factors all affect the estimated time remaining: residual moisture content after spinning; type of fabric; size of load; room temperature; fluctuations in power supply.

The electronics assess conditions in the dryer and adjust the estimated time remaining for a more accurate reading. Because of this, the time displayed can alter during the course of a programme.

Before the end of a programme

In many programmes the heating phase is followed by the cooling down phase: **Cooling down** will appear in the display. The programme is not finished until the cooling down phase has been completed.

Do not switch the tumble dryer off before the end of the drying programme.
5 Remove the laundry when the programme has finished

Anti-crease (if selected) and Finish will appear in the display to indicate that the programme has finished.

Please note:
- To avoid creasing, during the anti-crease phase the drum will continue to turn at intervals until the laundry is removed.
- The dryer will switch off automatically 15 minutes after the end of a programme/the end of the anti-crease phase.

It is advisable to remove laundry as soon as the programme has finished.

Check that all items have been removed from the drum. Anything left in the dryer could be damaged by overdrying when it is next used.

The drum lighting will come on when the door is opened. It will go out a few minutes later to save energy.

- Switch the dryer off by pressing the On/Off button.

The display will go out.
- Close the door.

Maintenance after each drying programme
- Please see "Cleaning and care" for details.

Open the door.
- Remove everything from the drum.
Selecting a programme

Selecting/changing a programme

</tr>
</thead>
<tbody>
<tr>
<td>Drying levels from</td>
<td>Machine iron - Extra dry</td>
</tr>
</tbody>
</table>

Use the multi-function selector to select the drying level you want, and confirm your selection.

– The display will show which drying levels can be selected for each individual programme.

– Programmes where the time can be altered

<table>
<thead>
<tr>
<th>Hot air</th>
<th>0:20 h</th>
</tr>
</thead>
<tbody>
<tr>
<td>10:00</td>
<td>Finish: 10:20</td>
</tr>
<tr>
<td></td>
<td>Duration: 0:20 h</td>
</tr>
</tbody>
</table>

You can increase or decrease the duration of the programme* using the multi-function selector.

The programme end time for the duration selected will also appear.

* If the tumble dryer has a payment system, the maximum duration for a programme is set during the commissioning process under the controls option WS-shortcut keys, ex time/int time.

– Other programmes

You cannot alter the drying level or duration for the other programmes.
Selecting a programme

Low temperature

Select *Low temperature* for all delicate or minimum iron fabrics with the care label (e.g. acrylic garments).

- Delicate fabrics are dried at a lower temperature.
- The programme duration is longer.

Press shortcut button \( 1 \) Low temp.

Saving a favourite programme

You can programme the shortcut buttons to call up the four most frequently used drying programmes. The *Save* option must be activated via the *Settings/Supervisor level* menu before the shortcut buttons can be programmed.

Press shortcut button \( 3 \) Save.

Selecting a shortcut button

Use the multi-function selector to select the number you want to save the programme to, and confirm your selection. Your settings have now been saved and the favourite programme will appear in the entry menu.

Repeat the procedure if you want to customise other favourite programmes, and save them to short cut buttons which have not yet been used.
Depending on the Delay start setting, you can use the Timer to set the time you wish a programme to finish or start at, or you can delay the start of the programme.

To open the Timer sub-menu

![Timer Menu](image)

- Use shortcut key 2 Timer to open the Timer sub-menu.

To select a delay start time

![Delay Time](image)

- Select the time required (in 30 minute steps) using the multi-function selector, and confirm.

The start and finish times will now be postponed by the time inputted. The maximum time that an automatic programme start can be delayed by is 24 hours.

To start the timer

- Press the Start button.

The timer will count down in minutes until the start of the programme. If the delay start time selected is more than one hour, the drum will turn briefly every hour to prevent creasing.

To cancel the timer

- Press shortcut button 4 Cancel.
- The programme can now be started.
Changing the programme sequence

Payment system

Credit will be lost if, after the programme has started, the door is opened or the programme cancelled (depending on how the tumble dryer was set up*).

* Either during the commissioning process or subsequently, a Miele service technician can re-set the payment system so that programming changes can be made.

Once a programme has started

- changing the programme

You cannot change to another programme once a programme has started (this prevents unintentional alterations).

You will need to cancel the current programme before you can select a new one.

- cancelling the programme

Press shortcut button 4 Cancel.

On some programmes, laundry will be cooled down if a certain temperature has been reached.

If shortcut button 4 Cancel is pressed again, Finish appears in the display.

- Open the door.
- Close the door.
- Immediately select the programme you want, and then start it.

Adding or removing laundry after a programme has started

⚠️ The laundry, the drum and the back of the tumble dryer all become very hot during operation. Take care when in the vicinity of the appliance, when opening the door and handling freshly dried laundry. Danger of burning.

- Press shortcut button 4 Cancel.

On some programmes, laundry will be cooled down if a certain temperature has been reached.

- Only open the door once the laundry has cooled down completely.
- Add or remove items as required.
- Close the door.
- Select a programme.
- Press the Start button.

Power cut

- If the tumble dryer was switched off during a programme or there has been a power cut:

- Press the OK button after switching the dryer back on and start the programme again.

Time remaining

The time left shown in the display may now vary from the actual drying time.
Cleaning the fluff filters

Fluff from items being dried is collected by the fluff filters in the door and the door opening. Clean the filters after each drying programme.

Cleaning them whilst dry

Open the door and pull the fluff filter (1) out as illustrated.

Use your fingers or a vacuum cleaner to remove the fluff from the surface of the filter.

Remove any fluff from the hollow part of the door opening. You could also use a cleaning brush which is available as an optional extra from your Miele Professional Service Department or use a vacuum cleaner.

Once clean, push the filter back into the door holder until it clicks into position. Ensure it is facing the correct way.

Also clean the door seal (2) with a damp cloth.

Use your fingers or a vacuum cleaner to remove the fluff from the two fluff filters in the door opening.

Close the door.

* The fluff filters should be checked and cleaned regularly but always clean immediately if the Clean out airways message appears.

⚠️ A clogged filter is a fire hazard! The lint filter must be cleaned after every programme.
Cleaning and care

Cleaning them with water

If there is a great deal of compacted fluff on any of the filters, they can be removed and cleaned under hot running water.

- Open the door and pull the fluff filter out of the door as described previously.

The two filters in the door opening can also be removed if you need to clean them with water.

- Turn catch 1 until you hear it click.
- Pull the filter by the dial out of the door opening as shown 2. Do the same on the other side.
- Rinse all the filters under hot, running water.
- Dry the filters thoroughly with care.

Replacing the filters

⚠️ Do not replace the filters if they are damp or wet. Damp or wet filters could cause operational faults.

- Push the large filter back into the door holder until it clicks into position. Ensure it is facing the correct way.
- Replace the filters in the door opening by first inserting them at the bottom and then pressing them into place at the top.
- Lock both catches (you will hear them click).
Cleaning the tumble dryer

⚠️ Disconnect the machine from the mains electricity supply.

⚠️ Do not use solvents, abrasive cleaners, glass cleaners or all-purpose cleaners. These could damage plastic surfaces and other parts.

⚠️ The machine must never be hosed down.

- Clean the housing and the control panel with a slightly damp cloth and a mild detergent or soapy water.
- The drum and other stainless steel parts can be cleaned with a suitable proprietary stainless steel cleaner following the manufacturer's instructions.
- Dry all parts with a soft cloth.
Cleaning and care

Cleaning the heat exchanger

⚠ Check the heat exchanger unit regularly. It should always be cleaned immediately if the Clean condenser unit or Clean out airways message appears.

Removing the heat exchanger

- Turn the lever on the inner cover downwards to the vertical position.
- Pull the cover forwards.
- Remove it by pulling it diagonally upwards.

- Open the access panel. The hooks at the side will prevent the panel from falling off.
- Now remove the panel by pulling it diagonally upwards.
- Then place it to one side.

- Turn the lever on the heat exchanger to the vertical position.
Pull the condenser (heat exchanger) unit out of its housing by the handle.

Checking the condenser unit (heat exchanger unit)

Hold the condenser unit up to the light as shown.

Check to see if there is any fluff inside it. The arrows in the illustration above indicate where to look.

If you cannot see any fluff:

- Replace the condenser unit (see following page).

If you can see some fluff:

- Clean the condenser unit as described below.

To clean the condenser unit

- Use a shower head or similar to rinse the unit out as shown.

- From the sides.

- From the front.

Fluff is washed out by the water.
Cleaning and care

- Check the condenser unit again for any visible fluff and, if necessary, flush it through again until it has all gone.
- Also make sure the rubber seals are clean.

The rubber seals must not be removed and must be free of kinks.

To check and clean the condenser unit housing

- Remove any soiling still visible inside the housing by hand using a damp cloth. Do not try and access areas you cannot reach by hand.

Replacing the condenser unit

- Push the condenser unit all the way back into the housing until it clicks into place.
  **The handle for the condenser unit must be at the top, and the lever at the bottom.**

- Turn the lever down to the horizontal position, making sure that the hook on the lever clicks into the groove at the bottom.

  When replacing the inner cover, ensure that the rubber seal fits correctly into the groove.

- Replace the cover making sure the hooks locate correctly. To do this, hold it at an angle and push it gently downwards.

- Then turn the lever upwards into the horizontal position to lock the cover.

- Replace the service panel and press the upper edge until it clicks into position.

It is important to ensure that both the condenser unit and the cover are correctly positioned and locked otherwise water may leak from the machine.
Problem solving guide

With the help of the following notes minor faults in the performance of the appliance, some of which may result from incorrect operation, can be put right without contacting the Miele Professional Service Department.

⚠️ Repair work to electrical appliances should only be carried out by a suitably qualified person in strict accordance with current local and national safety regulations. Repairs and other work by unqualified persons could be dangerous. The manufacturer cannot be held liable for unauthorised work.

* You can adjust the setting which controls if or when the check message appears:
See "Clean condenser unit" and "Clean out airways" in the "Settings/Supervisor level menu" section of the separate booklet "Commissioning, Programme chart and Settings".
<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible cause</th>
<th>Remedy</th>
</tr>
</thead>
</table>
| The laundry is not sufficiently dry.        | The load consisted of different fabrics.                                       | – Finish drying using the Hot air programme (timed drying).  
|                                              |                                                                                | – Next time, select a more suitable programme (see "Programme chart" in the separate booklet "Commissioning, Programme chart and Settings"). |
| Feather filled pillows smell after drying.  | Feathers are a natural product and this is quite normal.                      | The smell will dissipate after sufficient airing.                                           |
| Items made of synthetic fibres are charged with static electricity after drying. | Synthetic fibres tend to attract static charge.                               | Static charge can be reduced by adding a fabric conditioner to the final rinse in the washing programme or a fabric conditioner sheet to the load when drying. |
| There is a build-up of fluff.               | Fluff is principally the result of friction when garments are being worn and to some extent when they are being washed. Machine drying hardly causes any fluff to form and has no appreciable effect on the lifetime of the fabric. | Fluff is collected by the fluff filter and can be easily removed (see "Cleaning and care"). |

</tbody>
</table>
Changing the lamp

Disconnect the machine from the mains electricity supply.

Open the door.

You will find the interior lamp cover at the top of the drum aperture.

Insert a suitable tool, such as a wide bladed screwdriver, under the side edge of the lamp cover as illustrated.

Apply a little pressure and whilst doing so turn your wrist in the direction of the arrow to open the cover.

The cover will open downwards.

The temperature resistant lamp should only be ordered from Miele.

The lamp specification and maximum wattage is stated on the data plate and on the lamp cover.

Replace the lamp.

To close the cover push it upwards and press it on the left and right until you hear it click into position.

Ensure that it is fitted into position securely, as any moisture could cause a short circuit.
After sales service

Repairs
In the event of any faults which you cannot remedy yourself please contact Miele.
When contacting Miele, please quote the model and serial number of your dryer, both of which are shown on the data plate.

PC / Optical interface
The indicator or check light marked PC on the fascia panel is the interface used by Miele service technicians during servicing work for testing purposes and for updating the machine’s programme data.

Optional accessories
Optional accessories for this dryer are available from Miele.
Installation and connection

Front view

1. Mains connection cable
2. Control panel
3. Door
4. Service panel for condenser unit
5. Four height adjustable screw feet
6. External drainage options (e.g. via wash basin, wash basin drain outlet or gully)
   Optional accessory: Extension hose
7. Intake and exhaust vents for cooling the condenser unit
Installation and connection

View from the side

Rear view

Washer-dryer stack

1. Protruding lid edge (see arrows) for holding when moving the machine
2. Air exhaust vent for cooling the condenser unit
3. Stainless steel plinth (open or closed, optional Miele accessory)

The tumble dryer can be combined with a Miele washing machine in a washer-dryer stack. A stacking kit is required which can be purchased from your Miele Chartered Agent or the Miele Professional Service Department. The stacking kit must be fitted by a Miele authorised service technician.
Installation

⚠️ Make sure the dryer door can be opened without hindrance after installation.

Transporting the machine to its installation site

When moving the machine, you can hold it by the lid where it protrudes to the rear of the dryer. To manoeuvre the dryer out of its packing case to its installation site, you will also need to hold it by the front feet.

⚠️ Please ensure the stability of the tumble dryer when it is being transported.

Levelling the machine

The machine must be perfectly level to ensure safe and proper operation.

- The screw feet can be adjusted to compensate for any unevenness in the floor.
Installation and connection

⚠ The ventilation gaps on the tumble dryer must not be covered. The gap between the base of the tumble dryer and the floor must not be minimised by a plinth or thick-piled carpet as this will prevent a sufficient intake of cold air.

This tumble dryer is not suitable for building under.

Installation site

Air taken in for use in the drying process will be warm when it is expelled from the base and rear of the dryer. This expelled air heats up the air in the room. It is therefore very important to ensure that the room is adequately ventilated, particularly if the dryer is located in a small room. Otherwise running times and energy consumption could be increased.

Securing the tumble dryer against slipping.

⚠ Secure both front feet on the dryer using the fixing brackets supplied.

Payment system

This machine can be fitted with a MIELE payment system. The MIELE payment system (optional accessory) can be set up by a Miele technician or authorised Miele Service Agent when the machine is commissioned.

Coins / tokens must be removed from the payment system regularly, otherwise it will become blocked.

– Note for technician:

⚠ When connecting a payment system, the plug connector on the push-button switch (see connection diagram) must be removed from the factory default position and plugged into the coin mechanism. If this is not done, faults may occur in the payment process.
External drainage of the condensed water

The condensed water is pumped away through the drain hose which is located at the back of the dryer at the bottom.

Drain hose length: ............... 2 m
Delivery head: ................... 1 m

⚠️ Do not pull on the drain hose and do not allow it to become kinked as this could damage it.

Drain hose connection:

1. Direct into a sink or basin.
   - Hook the hose over the edge and secure.
   - Use the bow-shaped guide (see illustration on the right).

2. Connected securely to a floor gully.

3. Connected directly to a sink drain outlet.

Connection to a sink drain outlet

To connect the drain hose to a sink drain outlet you will need to use the adapter and hose clip located at the back of the dryer at the bottom.

- Remove adapter 1 and hose clip 3 behind it.

- Fit adapter 1 to the sink drain outlet using nut 2.

- Secure the drain hose with hose clip 3 to the nut.
Installation and connection

Electrical connection

This machine is supplied with a connection cable without a plug for connection to a suitable connection socket or isolator switch.

⚠️ The voltage, rated load and fuse rating are given on the data plate. Please ensure these match the site mains supply.

This machine must be connected to the electricity supply in accordance with local and national safety regulations.

Connection to the electricity supply must only be carried out by a suitably qualified and competent person.

Connection should be made via a suitable connection socket or isolator which complies with local and national safety regulations and which is easily accessible for disconnecting the machine from the electrical supply. Provision must be made on site to switch off all poles. Switches with a minimum all-pole contact gap greater than 3 mm are suitable for isolating the machine. These include circuit breakers, fuses and relays.

⚠️ If the machine is disconnected from the electricity supply, ensure adequate measures are taken to ensure that the machine cannot be reconnected to the electricity supply until all work has been carried out.

Should the connection cable require replacing or changes be necessary in the electrical installation, including checking and/or replacing the fuse, please make sure this is done by an approved electrician to ensure compliance with all local and national electrical safety requirements.

For extra safety, it is advisable to protect the machine with a suitable residual current device (RCD) with a trip current of 30 mA.

⚠️ This machine can be converted to a different voltage. Please observe the switching instructions given on the wiring diagram. Conversion may only be carried out by a Miele authorised service agent or Miele technician.

If converted, the heater rating must also be adapted.

⚠️ The machine must be permanently connected to the electricity supply so that the door can be opened. For this reason, it must not be connected to devices such as timers which would switch it off automatically.

WARNING THIS MACHINE MUST BE EARTHED
